Comments: Sweetwater Lake alternate site layout B.

In the many discussions with Sweetwater community members, and local county residents in Eagle and Garfield, It seems that a minimalist site design should also be considered.

This also is due to the situation that environmental studies, road volume studies, community impact studies, safety studies, and cultural and historical impact studies, are needed before any real design is possible. Also, in the initial NOI and scoping letter, so many details are vacant or vague.

A Sweetwater Lake minimalist design would leave the campground where it presently sits, remove all buildings, create some minimalist parking for day use, leave the horse outfitter as is, update the water system for basic use, maybe add a few pit toilets, and return much of site back to natural conditions.

This would be preferable to a larger development, and protect and preserve the wildlife and local communities.
