Comments: I am writing to express my full support of the Lickstone Project and any others like it. We must harvest some of the older timber in the entire western NC region in order to open the canopy, allow sunlight to the forest floor, and increase understory/young timber growth. Please do not listen to the very loud minority who would oppose so much as breaking a twig. Rather follow your biologically sound and well thought out plans for the management and the future of our forests and the animals that need the younger growth. Thank you!!
