Comments: Considering how quickly the current parking fills on busy days, I'm wondering how the number of parking spots compares between the current and proposed lots. It looks like the new lot expands over where the bathrooms and meeting ramada are currently located, but it also seems that a significant amount of space in the new lot isn't actually available for parking. How do the parking spot counts compare?

Also, the "Implementation Date" is listed as 12/1/25. Does this mean that it will be finished by the time of the year when Sabino's busy season starts, or the disruption of the parking area will coincide with thousands of people trying to park there?
