Comments: I would like to submit comment that I support the proposed actions for the Lickstone project. I will add that I would like to see the amount of young forest created increased. While the proposed amount of young forest that would be created is a vast improvement over what is there now, I think it should be increased. The Lickstone project area sits in the middle of two Wilderness areas and the Waynesville watershed, Lickstone is the only island of opportunity to get habitat work done for the species that require young forests.

Thank you,

Daniel McNeely
