Comments: I appreciate the response during the 17Jul2024 meeting concerning baseline chemistry of the forest environment. I do still have some concern with regards to the northwest Georgia section of the Chattahoochee Forest. Specifically there seems to be a general assumption of, for instance, low pH or other environmental indicators that are more likely to be the case in stream systems on more crystalline terranes. Please feel free to reach out - Crisp Geology would be happy to provide fieldwork and/or consultation concerning the potentially different conditions here in the NW Georgia Valley and Ridge systems.
