Comments: The Bannock Trail is an important cultural property in this area and logging it would completely destroy the character and buried resources. Logging trucks would further impact this significant cultural property. Logging has now been shown to actually increase the fire risk in areas. This logging would introduce weeds and substantial traffic in this quiet area. There is also the consideration for winter snow machine traffic which would certainly increase. It could also impact the portion of the Trail that enters the Park. This is a very bad plan. Please do not go forward with this.
