Title:

Comments: 100-mile trail system with a reduction in the amount of chairlifts and infrastructure .

Adding single track bike systems where you can have volunteers help maintain the trails can help create a sense of responsibility, ownership, and pride to the community. Adding lifts can help decrease the amount of land needed to ride to the top.

Trails in NWA have proven that people will move to the areas adding value to properties if trails are built. MTBing is proving to be a growing sport with dedicated riders, and it helps support health and camaraderie in the community.
