Title:

Comments: This project is very exciting and would be one of a kind in the area! I think the economic impact of this project combined with the building of I49 in the future would get people to the area faster than ever to enjoy the trails. Lift served downhill riding is a whole new experience unlike what is currently available in Arkansas and would draw tons of interest. The fact that the vertical foot drop is so large and comparable to other bike parks and also could be ridden year around would be huge for people seeking this type of riding. It could make Mena a premier destination for a growing hobby. People are already visiting many areas in Arkansas for biking and would even more so with this project!
