Title:

Comments: I am opposed to spraying of any kind. Spray is a chemical concoction designed to kill. It is very effective, not only killing a weed here and there, it kills all plants and insects. Hooves of animals are being eaten away by the poisons. You are effectively destroying habitat for wildlife. These poisonous chemicals enter into our watersheds as they are being washed downstream with the rains.

I am 100% opposed to Drone spraying because once a chemical is air borne, it travels indiscriminately, as we all learned with COVID. It is not ok to use spray whatsoever.

Read the book "A Bitter Fog" a true story of the effects of spraying at 5 Rivers. Discover the cancer rates and miscarriages in this area due to spray.

Please consider leaving our forest to Mother Nature to care for.
