Comments: I support the proposed action and moving this permit and design for Sweetwater Recreation area forward to provide for quality recreation opportunities, sustainable design, and financially viable.

State parks would be the best for this recreation management proposal because it can be viable for the state to manage this special spot and local management. Personally I don't think it will get overrun with tourists (maybe paddle boarders?) but this landscape needs facilities to be upgraded and managed for the long run economically.

Please do not let the "community nimbus" determine" this is their place" and not get managed. Population and recreation will increase but this place needs management and presence from staff not just locals.
