Comments: Can the Aspen Ski Co. present any documentation that proves that EMFs are not detrimental to our health.

There are over 10,000 studies that indicate that EMFs are bad for our health. There are ZERO studies that prove that they are safe.

Putting these towers will force everyone in the area to be exposed to the EMFs from the towers. People will not have a choice to avoid them.

Skiers want to get out in the mountains and be in nature. This is pandering to a few people who need to be attached to their technology.

We fall prey to the convenience of technology and are oblivious to the detriments it presents.

This will also impact the fauna and flora. Are there any studies to prove that it does not damage them?

In cities where 5G has been installed, there have been reports of flocks of birds and swarms of bees dying at the base of the towers.

The Aspen Ski Co talks about its concerns about climate change. Are these towers emitting EMFs that are microwaves?

Aren't microwaves used for cooking?

Does this mean that we would be adding to the cooking of the planet.

These towers are a bad idea and are in direct conflict with the Aspen Ski Company's talk of concern for the planet.

When will they stop invading the forest?
