Comments: I am not able quickly understand the nuances of the proposed changes to the current management plan from a brief review of the documents; however my understanding is the amendment will provide for better management of our old growth forests. I feel incredibly strongly that better management and stewardship of the existing forests should be a priority, especially in light of the climate. Please strengthen management and protection of what remains of our forests - the importance of our forests cannot not be underestimated. Thank you for helping protect our critical forests as our well-being depends on them.
