Comments: I am commenting on the GAP project in the South Toe/ Seven mile Ridge area. I realize that preventing widespread fires is a good goal, however these forests are fragile and habitat to many rare species. The land below the Seven Mile Ridge area is protected so there is logic in protecting adjacent and/or close by areas. Also many creeks flow down from this ridge to the relatively pristine waters of the South Toe River. Logging can certainly have an impact on the river as well. Thank you for your attention on this matter.....Jon Blood
