Comments: This is an addendum to an earlier email message I sent. I previously commented regarding the need for you to not only have iron clad policies to protect all mature and old growth forests, but to eliminate "loop holes" that the USFS and other agencies use to get around policies. I want to specifically add that you must stop the use of

euphemisms for logging, such as "tree mitigation"; "forest restoration", "fire mitigation" and on and on. We are well aware of the use of these euphemisms to hide the ongoing logging of old growth and mature forests. You must stop using terms like these and you must use real language regarding logging, including "clear cuts" because we know what is going on...we see it with our own eyes. The use of these euphemisms undermines our trust in our Federal agencies!
