Comments: I am totally against the proposed National Old Growth Amendment. The last thing we need is more red tape in managing our Forest. Wildfires are a HUGE problem for the last several years and the management of our forest for the last couple of decades has create a big part of this problem. This mismanagement is finally catching up with us. We need to create Healthy forest through select cutting, road access and the clearing of debris. We don't need to let it burn and create more pollution and warming. The so called science we have been following to manage these forest is clearly NOT working. I am strongly against this new Amendment.
