Last name: Giger

Organization:

Title:

Comments: The last thing we need is more legal action (vast and wasteful consumption of time, \$\$, and the political undertow that feeds off it) and bureaucracy to thwart the work of the folks actively, passionately and directly engaged in managing our natural resources. Science naturally evolves on a lagged basis, as mankind tests and retests its knowledge and assumptions in building better solutions - especially those that don't just alter or fight the natural systems themselves. As a result, funding is all-too-often held hostage in moving this complex ball forward - rather than implementing what's needed to ultimately benefit our species, let alone the planet that sustains us all. More productive avenues may be found in reducing EXISTING bureaucracy, conflicting power struggles, and the underlying media and political tugs-of-war that poison any rational action toward "better."
