First name: James

Last name: Kowalski

Organization:

Title:

Comments: We have seen first hand, especially in recent history the destruction that can take place in our Forests due to improper management. I urge the responsible management of forests to preserve and protect them from wildfire, insect and disease without adding to the length of time to implement measures due to increased bureaucracy or litigation. Thinning of our forests has proven an effective method and should be allowed to continue without additional "Red Tape"
