Title:

Comments: 1. I feel strongly that we need policies that accelerate forest thinning and other management activities to reduce the threat to our forests, wildlife and communities.

2. It will not save our forest, wildlife and communities from wildfires If the managers of public lands are not empowered to do their jobs and take care them. More bureaucracy is not the answer!

3. Do not add more red tape and litigation ro the management of our federal forests. let individual national forests management focus on implementing the Wildfire Crisis Strategy through their existing forest plans that will make our forests less susceptible to the current devastating wildfires!
