Comments: Dear US Forest Service, The primary threats to old growth forests aren't chainsaws or commercial logging, as the USFS analysis confirms.

Instead, the major threats are severe wildfires, insect infestations, and disease. Unfortunately, the proposed amendment adds layers of bureaucracy and red tape, instead of prioritizing active forest management to mitigate these natural threats.

Under the current process, it already takes years for the Forest Service to implement forest health treatments, which are critical to reducing the risk of catastrophic wildfires. These delays are often made worse when projects are halted by litigation.

The Forest Service's threat assessment highlighted that over 70% of mature and old growth forests are at high risk of wildfire-caused mortality. This is compounded by the fact that forests in areas reserved from active management, such as wilderness areas, have seen greater losses of old growth than forests where limited timber harvest is allowed. In contrast, old growth forests have actually increased on managed forests. We have seen this increase in healthy old-growth forest conditions in Northern New Mexico, in response to stewardship logging contracts, which are the norm here. All logging taking place in the Carson NF is restoration logging. The Taos Valley Watershed Coalition, of which I am a founding member, that is composed of over 160 organizations, agencies and local governmental bodies, is fully in support of the continued increase of pace and scale of the Wildfire Crisis Strategy.

Severe wildfires are the greatest threat to our forests, wildlife and communities. We need policies to accelerate forest thinning and other management activities, not complicate the advancement of good common sense.

Extra bureaucracy won't save our forests-proactive stewardship will. Please continue to empower our public lands managers to do their jobs and take care of the forests.

Rather than adding more red tape and litigation to the management of our federal forests, individual national forests should focus on implementing the Wildfire Crisis Strategy through their existing forest plans to achieve desired conditions on these landscapes. Thank you. Mark Schuetz
