Comments: I am in favor of Alternative 3, with the amendments that will protect it as a National Park. The others are too vague and allow commercial companies to profit from harvesting, which we've seen from the past that they will use their influence to lawmakers that'll allow them to do more damage to the ecosystem and not be held responsible. More damage will be done to our already changing climate which these forests help keep in check, and they're already being pushed to their breaking point.
