Comments: Thank you for all the USDA Forest Service does to preserve and protect our national forests. I appreciate all your efforts, past and current, to define, identify and protect old growth forests. In pursuit of these actions, as revisions are made and further protections developed, I encourage the use of specific language and directives to put in place strong, clear protections regarding timber harvest and invasive enhancement treatments in old growth forests. Please remember to consider the future of our forests, both immediate and long-term, and the ecological place old growth forests hold in that future.
