Comments: The policy must include a direction that prevents degradation of existing old-growth forests and trees, ensuring that management actions are beneficial and "protect and enhance" old-growth conditions.

It is essential to acknowledge that many existing old-growth forests, like those in the Pacific Northwest and eastern U.S., do not require active management. Passive stewardship, intentionally choosing restraint, is as important as active management.

Clear standards and guidelines must be established to ensure the stewardship of sufficient older mature forests to restore old-growth distribution and abundance.
