Last name: Anon

Organization:

Title:

Comments: Science shows that you should preserve the large 'mother' trees to protect the viability of all the trees and all species growing near them. It has been proven that old growth trees and forests have innumerable benefits. It helps fight climate change to leave old trees in the ground that support the growth of surrounding trees and organisms for miles and years. What happens with trees above ground is only the tip of the iceberg. Stop raping the forests and reducing biodiversity by taking out the oldest trees. Not to mention IT'S JUST THE RIGHT THING TO DO.

Everyone reading this: ssk yourself how you can get out of the old 19th Century mindset and bring your organization into the 21st century. Every individual involved in government mismanagement of our precious ancient trees should be ashamed if they don't support the right choices. You can surely figure out how to cull forests intelligently. Use your position to help your organization become better, do something nice for the environment and living creatures, don't be a slave bot.
