Title:

Comments: I support the Ruffed Grouse Society and American Woodcock Society objections to this plan. A diverse forest is a greater benefit to the overall health of the forest, wildlife and diversity.

In addition, forests are an unstable carbon storage sequestration option. See forest fires in California and Canada where many tons of carbon are released. Unless China (and other emerging economy countries), which are building new coal plants every day, reduce emissions any reduction here has no affect on atmospheric carbon buildup.
