Comments: I believe BLM should provide a detailed plan on the exact environmental impacts these horses are making. If they are impacts to the Mono Lake Tufa, then maybe restrict human access to the Tufa, as I have seen, not only personally but also in social and general news media, people climbing all of the Tufa. Where is the Water District? Or should we ask the LAWD what their impact has been on the area, specifically Mono Lake's ongoing health risks? As we all know, they have done nothing but hurt the Owens Valley for decades. Did BLM ever create any projection studies that account for horse breeding? That "x" amount of land might not support "x" number of horses. Some questions need to be asked by the public, and BLM must provide answers.
We have all seen the brutal methods used to wrangle up wild horses throughout our country. Will press and public members be allowed to witness these round-ups so there is accountability with BLM's methods? How will the approach to gathering them change when there is an abundance of foals? It looks like nothing can be "free" any longer. We need to tame, kill, remove, and eliminate anything that is "free" instead of coming up with solutions. Wild Mustangs will not stop being Wild in their nature, meaning it will be virtually impossible to tame them and bring them into the domesticated world. I should know I had a rescued Mustang. Many other parties in the area mentioned have caused "environmental" issues. Humans, the LAWD, and now that some of their "environmental impact is being healed, we now need to protect it from the Mustangs suddenly. The Mustangs had to manage when we were destroying their land, and maybe it is time for us to manage how to save it for them.
