Comments: Stibnite has a history of pollution. They will continue to pollute. Do not trade short term economic gains and hollow promises of environmental best practices/remediation for the long term ecologic health and vibrant recreation/tourism economy of the Salmon River and Frank Church Wilderness. Stibnite will continue the pattern of environmental destruction and skirting their environmental responsibilities once their mineral extraction is no longer viable. The public and US government will be left to cleanup this mine and deal with the long-term repercussions. The negative downstream impacts to the Salmon River Watershed will be immeasurable. Do not reopen the Stibnite Mine.
