Title:

Comments: I am a hunter and I would like to express my support of Alternative 2 that would manage the stewardship of old growth forests. A science based approach to management promotes wildlife habitat and diversity. It is a disappointment to me when well meaning, sometimes very loud, but ultimately ill informed individuals suggest that old growth forest preservation should be the only goal of the USFS. A healthy forest ecosystem should contain a wide variety of age and habitat types. I believe that that is the science of it!
