Comments: This is the moment to end the cutting of old-growth trees in all national forests and all forest types and end the cutting of any trees in old-growth stands in infrequent fire forest types. The nation needs to preserve what old growth is left, for the biological diversity values as well as the their value as a carbon sink

There are logging projects in the pipeline that threaten mature and old-growth trees. The Forest Service included an elevated review process for proposed projects that contain old-growth in their announcement, but there is still a pressing need for the agency to follow through and ensure current projects are re-evaluated to reverse the loss of old-growth.

Also,save mature trees to become tomorrow's old growth. Come on, do the right thing.
