Title:

Comments: Please protect mature and old growth forests from commercial logging. These are the majestic cathedrals of nature. While some select clearing of undergrowth may be necessary to reduce wildfire danger, commercial logging decimates the ecosystem of the mature and old growth forests. If logged commercially, the younger forests that are planted do not support the complex biodiversity or massive carbon sequestration and storage as forests that are largely left alone. Please permanently conserve our most valuable mature and old growth forests. Especially from future administrations. Thank you!
