Comments: Save old growth forests! In 2022, President Joe Biden issued an executive order that required the US Forest Service (USFS) to, among other things, "develop . . . conservation strategies that address threats to mature and old-growth forests on Federal lands." The USFS has responded by issuing a draft National Old-Growth Amendment (NOGA) that would amend nearly all national forest land management plans. The NOGA has enough loopholes to drive lots of log trucks through. Public comments are urgently needed by midnight Pacific Time on September 19, 2024, to influence the Biden administration to overrule the USFS in this matter. Please REALLY save our old growth forests for ourselves and our children and their children!
