Comments: Please consider these comments in regard to your proposed Old Grow policy proposal.

Old growth forests are a special and unique habitat that is sparsely available (less than 10%) lands across the US. This unique forest type represents biodiversity, is a huge carbon sink for climate change, and is simply part of our legacy to pass along to our children.

The options presented by the USFS are not ideal. If I was to favor any, it might be Alternative #3 with several amendments to prohibit any additional logging.

Old growth forest have existed for generations. Why now are we trying to mess it up!

Please protect this unique lands as American treasures.
