Comments: Dear USFS,

Cease and desist all logging on public lands containing old growth forests and mature ecosystems. These forests produce vast amounts of oxygen in addition to sheltering a myriad of species and filtering water. Not to mention the knowledge, wonder, peace and enjoyment these areas provide. These trees and forests need to remain in tact, as we the people benefit from them most when they are still a functioning ecosystem. As a retired science and social studies educator this is one of the most crucial bits of conservation and infrastructure a government need provide its constituents. Let old growth forests remain evermore untouched.
