Title:

Comments: Please stop cutting old-growth and mature (soon-to-be old-growth) trees and/or clear-cutting in the National Forest. The rapid climate change we are experiencing coupled with such practices rapidly multiplies flooding and the degradation of clean water. It also destroys valuable habitat at and away from the cut sites. Our government should always be looking for opportunities to protect the planet and all that inhabit it.

Thank you for your consideration,

Bill Johnstone
