Comments: I cannot believe we are all still protesting this...do we want to survive as a species? We must protect old growth forests, and ALL forests, to produce our oxygen we must have to survive. We need forests to sequester our carbon. We have a circular survival cycle with forests which allows our very survival. All trees cut allow heating of the earth , right there, in that same place the tree just was. Just walk under a tree on a hot day and compare it to walking in a parking lot. Anyone can tell the difference. Trees are necessary for our survival.
