Comments: I support and applaud the proposition to add an amendment to manage old growth forests in a proactive way. It was with the greatest awe that I visited the Redwoods this summer again in California. Humans have built monuments and houses of prayer for thousands of year while nothing can compare with these 'old masters' in my opinion. They play more than an ecological role! While we can't undo the ecological damage done by those before us, I believe we are at a crossroads and it is essential to protect old growth forests before we lose more. It is with great hope that I ask you to add this amendment to help our climate, old growth supported fauna and flora and future generations!
