Comments: Siuslaw National Forest needs to stop all old growth logging. This is one of the easiest things that can be done to sequester more carbon in western Oregon.

On a personal note I am particularly interested in preserving both old growth and the large second growth in Township 16 S, Range 8 W. Some of the Siuslaw National Forest in that area is old growth. Also here are several private landowners (including me) in that area with conservation easements that limit or forbid logging in an effort to move to old growth stands. Don't undermine our efforts by logging around us.
