Comments: My decision is to support Alternative 2 of this forest plan. I agree that old-growth forests share an important value within the ecosystem. Being a resident of Vermont our forest requires early successional forest to increase our biodiversity. Our game bird populations as well as non-game populations need to increase. An increase in early successional forests will provide for greater populations. An increase in old-growth forest that I can support would involve a science based plan that would treat other silvicultural practices with equal value.
