Title:

Comments: The only ecologically responsible plan is to implement NOGA-FW-STD-03 which prohibits proactive stewardship in old-growth forests for the purpose of timber production.

Preservation of irreplaceable old growth forests, native grasslands and swampland are essential to combat Climate Change.

Timber production is defined as. (my definition turning ecosystems into a waste product)

As opposed to Forest service definition

the purposeful growing, tending, harvesting, and regeneration of regulated crops of trees to be cut into logs, bolts, or other round sections for industrial or consumer use (36 CFR 219.19).
