Title:

Comments: As an avid outdoor enthusiast that uses the current off road trails that are available, I am advocating for the preservation of the trails for future use and expansion. We travel for many off road adventures and have experienced the way other publicly used trail systems function. I am in favor of vehicle permits and would also recommend a sign in and out program. With the diverse type of terrain that the Badlands offers, it would be best to have trails that are specific to the different types of vehicles that are normally used for off road activities(atv, side by side, motorcycles or off road vehicles). Many of the current trails that are on forest service land are designed for specific types of vehicles and would be best to have different categories of permits for each type of vehicle to have access on the proper trail system, this helps with trail preservation and long term stainability. I would also like to express gratitude to the US Forest Service for working towards a plan that allows this public property to used by many different groups of users.

Thank you Justin Seifert
