Title:

Comments: I fully support the efforts of the UFSF in collaboration with the Kentucky Fish & Wildlife Agency of implementing sound science based management on our public lands. I completely understand the need for diverse landscapes to provide biodiversity through various habitat types. Young successional forests and grasslands are in dire need across the midwest and south, projects that revitalize these landscapes are a priority to support numerous game and non-game animal species along with native vegetation.

Thank you for all for your devotion of managing our shared lands and waters!
