Title:

Comments: I would like to begin by stating "Thank you" for your foresight and wisdom in this critical forest regeneration project. This is a "sound management / common sense" project and should be done without delay.

The "Stearns Ruffed Grouse Habitat Management Project" is the type of necessary action needed to create, not only, vital Ruffed Grouse habitat, but also habitat needed for other types of wildlife.

This project will have a lasting, positive effect on the Daniel Boone National Forest for years to come.

Thank you for your consideration.
