First name: Dawn

Last name: Chance

Organization:

Title:

Comments: When we allow mining, we allow our drinking water and our air to be contaminated. There are long term health repercussions for the people that corporations view as resources. Basically, mines destroy human life.

What mines do to natural wonders and the environment should be considered murder. Delicate ecosystems are destroyed, entire species of wildlife gone. When there is no longer food to eat, water to drink, or air to breathe, what good is your record breaking profits?
