Comments: I am totally against removing the fabulous forests in California. Deforestation ruins other species and makes humans the worst species on the planet for our negative impact.

I spent my lifetime in California and camped in all these forests for my first 20 years. I have lived in Mammoth Lakes for 17 years. These are wonderful places for humans to visit as long as they obey the fire rules. They due so in Mammoth Lakes and we have few fires.

Don't screw up the state more than is has been already.

I have been to other countries where deforestation has killed off major species to a great expense to the animals and global warming.

Don't ruin the United States.

Michele
