Title:

Comments: We have to stop cutting down forest. Not only in this country but worldwide. Trees and other plants remove carbon from the air we breathe and cool the areas where they are. You allow companies to take down the trees and clear the forests, but you don't force them to plant new trees and grasses to maintain the area where they were removed leading to soil erosion. If we don't stop what we are doing, all life on this planet will die.
