Comments: Dear Forest Service, I do not support fire prevention in wilderness areas. It's pretty clear that USFS practices target management instead of preservation and protection. I am worried about the integrity of our public agencies. What is the ethic concerning the ecosystems of our earth? You know the science. You know the emergency life is experiencing. Must we humans see only "inch by inch"?

Please do not cut nor burn in the wilderness areas. How do you intend to uncut a forest?
