Comments: I am appalled that you would even consider burning or tearing down a forest that has survived for decades. All of the forests need to be saved for future generations and wildlife conservation. Why are you doing this? This is ridiculous. We don't need any more golf courses or urban sprawl. There are so many wildfires in California and in this area that it is destructive, we are here to take care of, the land and wildlife it's just ridiculous that you would even consider burning when there are so many things being burnt now I am so sorry that this is happening and I want to express my feelings that this is really wrong. We only have one planet and we are destroying it day by day. There will be nothing left for our future generations. Please consider taking another look at what your proposal will do to our great forest and don't forget about our ecosystem. We are slowly poisoning this planet and there is only one so please reconsider what you're doing. Thank you.
