Title:

Comments: I hiked the John Muir Trail in 1949 traversing several of the identified Wildernesses. I have been involved in wildland fire management for 50 years.

I believe that each designated Wilderness area or proposed Wilderness area should have its own unique management plan; thus I favor Alternative C. All motorized ground vehicles should be prohibited; an exception would be allowing chain saws to construct fire lines and fall burning snags.

It is unclear what actions would be permitted in the area outside of designated Wilderness areas but the area is so large that it seems that one or more management plans would be needed there also
