Comments: To whom it may concern,

I am opposed to the proposed mineral withdrawal and I support the "No Action" alternative provided in the Draft Environmental Assessment. I believe the EA document has too many "what if"/"possible" messages to be validated. It is irresponsible to lock the land up for any future use, whether that be for mineral exploration, recreation, etc. without a complete and thorough assessment. The land up for debate is too large a number to withdraw at one time.
