Title:

Comments:

Mature trees have been shown to be particularly effective in sequestering carbon, so retain as many mature trees as possible;

Drop the 549 acres of remaining complex mature forests from the harvest plans;

Protect all Douglas-firs trees with a 30" diameter or more in matrix stands; and

Provide a no-cut buffer of 1.5 to 2 drip lines on all trees with a 40" diameter or more to protect their root systems from the negative impacts of heavy machinery.
