Comments: Hi, Please consider these recommendations on the management of the Little White Salmon Forest Resiliency and Fire Risk Mitigation Project:
Drop the 549 acres of remaining complex mature forests from the harvest plans;
Protect all Douglas-firs trees with a 30" diameter or more in matrix stands; and
Provide a no-cut buffer of 1.5 to 2 drip lines on all trees with a 40" diameter or more to protect their root systems from the negative impacts of heavy machinery.

These are reasonable suggestions that I hope will be considered. We must protect our special forests while we have them.

Thank you
